Avast Business

Avast Business Cloud Backup

Protect your business data. Don't pay a ransom.

With growing remote workforces, increasing threats of ransomware, and expanding compliance needs, the risk that endpoints face remains high. SMBs cannot keep up and the bad guys know it! According to Statista, 71% of companies worldwide were affected by ransomware in 2022. Every company needs a secure, simple to configure, and easy-to-manage endpoint data protection solution.

Avast Business Cloud Backup helps keep your business data available and supports business continuity by helping protect data on Windows devices and servers with an automated backup process that is easy to deploy and manage from anywhere.

Benefits

Security

- Ransomware protection
- AES-256 encryption
- File version history
- Unlimited retention policy

Ease of use

- Back up the most critical data as often as every hour
- Back up from wherever you work
- Fast uploads and recovery

Central Management

- Automate installs
- Centralized, intuitive dashboard
- Reporting and alerting

All in the cloud - no hardware required

Statista: Annual share of organizations affected by ransomware attacks worldwide from 2018 to 2023

Features

Selectable backup
Choose exactly which data you want to back up and what can be left behind. Various options allow you to define your backup criteria based on file type, folder destination, and file size. You can also exclude data that doesn't need to be backed up, reserving your cloud storage for business-critical data. Once defined, set the desired frequency of your data backups, and you're done.
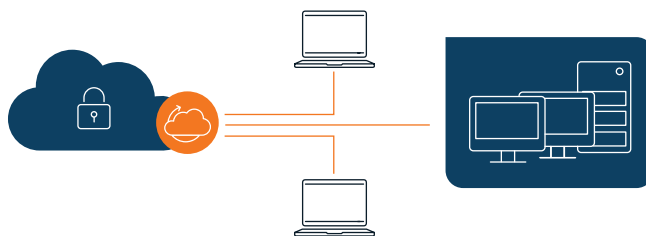

Internet speed
To prevent negative impacts on internet speed and employee productivity, you can schedule backups to occur during non-work hours to work seamlessly with your natural business workflows.

Simple deployment
Once the Avast Business agent is installed on a device, you can remotely deploy our Cloud Backup service directly from the Business Hub. Additionally, you have the option to send out an email with installation instructions or download and install the service using the exe/msi installer.

Automatic Encryption
Help protect data at every stage of the backup and restore process with automatic AES 256-bit encryption of files during transit and storage.

Cloud Storage
All backups are stored in the cloud and are accessible anytime, anywhere over the internet. Recover data instantly whenever you need it.

Comprehensive Reporting
Gain valuable insights into the operability of your backups. Real-time access to backup history, storage usage, backup anomalies, and more is available to you.

Files Versioning
Whenever a file that is set to be backed up is changed, a new version is uploaded to cloud storage. This ensures that you always have the latest version of the file available, while also keeping the previous versions ready to be restored whenever you need them.

Restoration
You have multiple options to choose from when restoring data. You can push data directly to the desired device remotely, download it as an archive, or utilize a local agent on a device for downloading.

Available in the Avast Business Hub

Our Cloud Backup Service is delivered through the Avast Business Hub – an integrated, cloud-based security platform for businesses to manage Avast Small Business Solutions deployed in their networks. It provides real-time visibility of threats, comprehensive reporting, and management capabilities, all in a single console.
